

SITE WASTE MANAGEMENT POLICY

KW Contractors Limited has a commitment towards sustainable construction and fulfils this commitment by implementing a site waste management policy.

KW Contractors Limited will carry out detailed material take offs prior to ordering materials to ensure that only the required quantities are ordered for a project. Works will be planned and implemented in a manner which creates the least amount of waste resulting from the use of materials.

Material waste will be reused wherever it is possible and practical to do so, either on that project or on another project.

KW Contractors Limited will, wherever possible identify to the client, aspects of the proposed design which may involve excessive waste and will work with the client to implement a proposal to reduce the waste which may be generated.

KW Contractors Limited appreciates the burden placed on current landfill sites and therefore all waste generated on a project will be segregated, wherever it is possible and practical to do so, and waste which can be recycled will be either reused by KW Contractors Limited or sent to the appropriate recycling facility.

KW Contractors Limited will use approved waste management contractors for the disposal of all waste and will keep all disposal records received from these contractors on file.

Yours faithfully,

for **KW Contractors Ltd**
